Summary

Cloud/DevOps Engineer with 2.5 years of extensive experience building and operating cloud infrastructure, CI/CD pipelines, and deployment automation in enterprise environments. Proficient in Azure, Kubernetes, Terraform infrastructure as code, and GitLab CI/CD workflows, with proven impact reducing build times by 30% and improving deployment speed by 40%. Experienced in running production workloads inside Azure AKS and tracking application performance metrics via Prometheus and Grafana dashboards. Worked on AI platform infrastructure including Azure ML and Azure OpenAI Service in a regulated banking environment.

Education

College of Engineering, Pune (COEP) <i>B.Tech Electronics and Telecommunication; CGPA: 8.39</i>	2021 – 2024 <i>Pune</i>
Institute of Petrochemical Engineering <i>Diploma; 99.3%</i>	2018 – 2021 <i>Raigad</i>

Experience

UBS <i>Software Engineer (DevOps)</i>	Aug 2024 – Present <i>Pune</i>
- Provisioned and managed Azure ML and Azure OpenAI Service infrastructure for internal AI initiatives, handling model endpoint deployment and access control via Entra ID - Migrated and managed production Kubernetes workloads from on-prem clusters to Azure AKS using Terraform infrastructure as code, reducing cluster provisioning time by 40% - Designed and maintained reusable Helm charts for 4 application deployments across dev, staging, and production environments - Reduced CI pipeline build time by 30% by introducing Docker layer caching and parallelising test stages across extensive GitLab CI/CD workflows - Streamlined release workflows across 10–30 GitLab CI/CD pipelines, reducing deployment execution time by 40% - Managed CI/CD pipelines in a regulated banking environment, ensuring compliance with audit and change management requirements	
<i>DevOps Intern</i>	Jan 2024 – Jul 2024
Refactored CI/CD pipeline codebase from 7000+ lines to ~1000 lines, improving maintainability and reducing onboarding time for new engineers	

Projects

MLOps Pipeline Terraform, AKS, Helm, GitHub Actions, Prometheus, Grafana	2026
- Engineered an end-to-end MLOps pipeline deploying an LLM-powered Document Q&A API on Azure AKS, auto-scaling 2–10 replicas via HPA, leveraging fully Terraform-provisioned infrastructure (VNet, ACR, Key Vault, AKS) for production workloads - Implemented multi-stage CI/CD with GitHub Actions – automated testing, Docker image build and push to ACR, Helm deployment to AKS, and automatic rollback on failure - Configured Prometheus alert rules and Grafana dashboards tracking API latency, error rates, LLM inference time, and pod health across production namespace - Secured infrastructure with Azure Key Vault CSI driver for secret injection, RBAC service accounts, non-root containers, and Trivy image scanning in CI pipeline	

Skills

- **Proficient:** Kubernetes, Docker, Helm, Terraform, Ansible, Puppet, GitLab CI/CD, PowerShell, Bash, Linux, Windows Server, Azure (AKS, VNet, Blob Storage, Key Vault, ACR, Azure Monitor, Log Analytics, Entra ID), Azure OpenAI Service, Azure AI Foundry, Hashicorp Vault, Prometheus, Grafana
- **Familiar:** GitHub Actions, Azure ML, GPU VM provisioning

Certifications

- Azure Administrator Associate (AZ-104)
- Azure Fundamentals (AZ-900)
- Azure AI Fundamentals (AI-900)
